

Quarterly Sustainability Report – Q2 2025

Prepared by: GreenFuture Team | June 10, 2025

In Q2 2025, GreenFuture made significant progress in expanding renewable energy access across underserved regions. Our solar installation projects were launched in 12 new communities, bringing clean, affordable energy to over 30,000 households. These initiatives have reduced carbon emissions by an estimated 18,000 metric tons this quarter alone.

Community engagement remained a cornerstone of our mission. We conducted 15 educational workshops on sustainable energy practices, reaching more than 2,000 residents, students, and local leaders. Feedback showed high levels of enthusiasm, with 94% of participants expressing interest in adopting solar solutions for their homes and businesses.

Looking ahead, we are committed to scaling our impact by Q4 2025. Our goals include launching a youth climate ambassador program, installing 5,000 additional solar units, and forming strategic partnerships with municipal governments to support long-term sustainability planning.

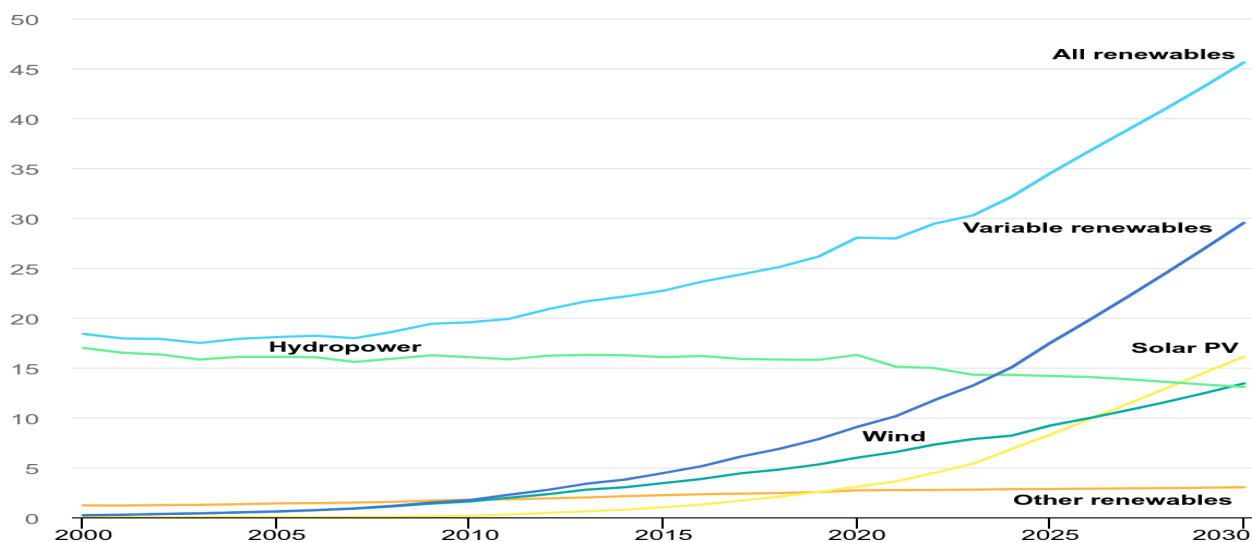

Figure 1: Solar capacity increased by 68% over 5 years.
